Emergency First Response (EFR) Course

The Emergency First Response Primary Care (CPR) and Secondary Care (First Aid) courses make up a foundational offering in emergency care for the lay provider. These two courses teach people how to provide emergency care for someone in need. These courses are designed to make learning easy by providing a non-stressful environment in which participants can practice and apply the emergency care skills taught them. The courses are further designed to:

1. help participants remember appropriate emergency care procedures during times of need, and
2. encourage participants to apply those procedures by assisting those needing emergency care.

The EFR Primary and Secondary course are divided into three segments: 1) knowledge development, 2) skill development and 3) scenario practice. Participants will be given a manual, *Emergency First Response Participant Manual*, and the course will take one full day (roughly 8 hours). It is expected that all participants read through the manual prior to the start of the course and complete all knowledge reviews. Upon completion of the course participants will be administered an exam which they must complete and score at least 75% on. The skills taught in these courses are encouraged to be refreshed every 24 months. An Emergency First Response Refresher course is also available.

Emergency First Response courses are based on internationally recognized medical guidelines and follow protocols from the consensus view of the International Liaison Committee on Resuscitation (ILCOR). These courses follow the same priorities of care used by professional emergency care providers. Educationally, the courses reflect a well researched instructional design for this type of training.
